CHAPTER 1: INTRODUCTION

1.1 History of Program

Kentucky has maintained a statewide transportation planning process since the 1970s through the 15 Area Development Districts (ADDs). In 1995 Kentucky expanded and formalized a public involvement process for the statewide transportation planning process in response to the directives of the Intermodal Transportation Efficiency Act of 1991 (ISTEA). ISTEA and its successor, The Transportation Equity Act for the 21st Century (TEA-21) enacted in 1998, set the policy directions for more comprehensive public participation in federal and state transportation decision-making. The Safe, Accountable, Flexible and Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) passed in 2005. SAFETEA-LU addressed challenges such as improving safety and reducing traffic congestion, improving efficiency in freight movement, increasing intermodal connectivity, and protecting the environment. Moving Ahead for Progress in the 21st Century Act (MAP-21) passed in 2012. MAP-21 built on and refined many of the highway, transit, bike, and pedestrian programs and policies established in the previous bills. Most recently the Fixing America’s Surface Transportation Act (FAST Act) passed in 2015. The FAST Act maintains a focus on safety, keeps intact the established structure of the various highway-related programs and continues efforts to streamline project delivery. It also provides, for the first time, a dedicated source of federal dollars for freight projects. These Congressional acts authorize all on-going federal-aid transportation programs. There are critical components of each piece of legislation that require input at the early stages of the planning process from local government, communities, interest groups, regional governments and citizens. Among the most essential provisions are the following:

- Federal reliance on the statewide transportation process, established under ISTEA, as the primary mechanism for cooperative transportation decision making
- Coordination of statewide planning with metropolitan planning
- Opportunity for public involvement provided throughout the planning process
- Emphasis on fiscal constraint and public involvement in the development of a three year Statewide Transportation Improvement Program (STIP)
- Emphasis on involving and considering the concerns of Tribal governments in planning
- State development of statewide transportation plans and programs

The Kentucky Transportation Cabinet’s (KYTC) statewide transportation planning process is accomplished through a cooperative program with the KYTC Central Planning Office, the 12 Highway District Offices (HDOs), 15 ADDs, and 9 Metropolitan Planning Organizations (MPO). The ADDs and MPOs are responsible mainly for the analysis of data and transportation systems, identification and evaluation of needs in their planning area, the coordination of public input for the STIP, and the subsequent evaluation and prioritizing of identified needs in the KYTC Unscheduled Needs List (UNL) for possible inclusion in the KYTC Six-Year Highway Plan.

KYTC Polices and Procedures for the Regional Transportation Program outlines the policies and guidelines for the program within and in relation to the designated ADD of the Commonwealth of Kentucky. State Legislation was enacted in 1972 creating the ADDs by law in Chapter 147A of the Kentucky Revised Statutes (KRS). The KYTC has historically administered major comprehensive transportation programs at the urban, metropolitan, and statewide levels. The creation of the ADD pursuant to federal legislation established an effective link for the development of a comprehensive transportation program utilizing local, regional, and statewide agencies.

The ADD primarily conducts activities in support of transportation planning for the rural areas of the Commonwealth and our MPO partners are responsible for activities in the nine urbanized areas. The
ADDs are concerned with all modes of transportation including: air, water, rail, highway, transit, pedestrian and bicycle. The jurisdiction of the regional program is not necessarily limited within the boundaries of the ADD making it necessary to include coordination between the MPO and our partners in the HDO.

The FIVCO Area Development District is composed of five counties in North Eastern Kentucky: Boyd, Carter, Elliott, Greenup, and Lawrence. However the Regional Transportation Area is comprised of Carter, Elliott, and Lawrence Counties. Boyd and Greenup Counties are part of the KYOVA MPO area.
1.2 Map of Statewide ADD, MPO, HDO Boundaries
1.3 PURPOSE OF THE REGIONAL TRANSPORTATION CONCEPT PLAN

The major activity conducted by the FIVCO Regional Transportation Program is to support the KYTC Statewide Transportation Planning process. The KYTC provides an annual scope of work to define the regional transportation activities to be conducted by FIVCO to support the KYTC. Included in the scope of work is a specific set of resource documents identified for the Regional Transportation Concept Plan (RTCP). The RTCP is utilized as a resource document for the entire region while developing goals and objectives for the transportation system, identifying and evaluating needs, reviewing and documenting projects, and throughout the prioritization/ranking process. The RTCP is the “umbrella” that houses data collection components relevant to regional transportation. The RTCP document consists of an introduction for each component detailing the reason for, location maps and what recommendations if any can be construed from existing data and research. It is designed to be multi-modal in nature and address all forms of transportation in the region to include highways, air, river, rail, transit, pedestrian and bicycle.

The purpose is to involve local leaders, public officials, and the general public in the transportation planning process. It is designed to develop a working relationship between local leaders, transportation officials and planners, and concerned citizens, with the goal of creating an open environment, allowing for open and informed public input, so those transportation plans receive local acceptance and support. The elements collected in the RTCP can be used as a means of generating better input from local officials and citizens concerning transportation issues and projects.

FIVCO ADD Regional Transportation Planner is responsible mainly for the analysis of data, identification and evaluation of needs in their region, and the subsequent evaluation and prioritization/ranking of projects in the UNL for possible inclusion in the KYTC Six-Year Highway Plan. FIVCO’s role in the statewide transportation planning process is to:

- Work with the Regional Transportation Committee (RTC) to evaluate and prioritize all transportation needs concerned with all modes of transportation in the region.
- Identification of new needs
- Prioritization/ranking of unscheduled needs
- Establish a public involvement process that will involve diverse interest groups in the statewide transportation planning process – involving all modes of transportation.
- Provide coordination with other planning activities in the region.
- Complete the various tasks described in its annual scope of work.

The role of RTC is to provide input into this regional and statewide process. The committee is comprised of a diverse group of interest that impact or are impacted by the transportation system. The committee will work with the FIVCO ADD Regional Transportation Planner in evaluating and prioritizing needs concerned with all modes of transportation.

Through cooperation with FIVCO ADD, the RTC, local officials, transportation providers and users, and the general public, efforts are made to identify long-range or conceptual transportation needs resulting from FIVCO ADD’s Regional Transportation Planer efforts to assess the mobility and accessibility for the region. This identification process is considered an on-going activity with the FIVCO RTC and the District 9 and 12 Highway Offices following the continuous evaluation of the local and regional transportation systems.
CHAPTER 2: DEVELOPMENT, REVIEW AND RANKING OF PROJECT IDENTIFICATION FORM

2.1 INTRODUCTION

The statewide transportation planning process is accomplished through a cooperative program with the Cabinet’s 12 Highway District Offices (HDOs), 15 Area Development Districts (ADDs), and 9 Metropolitan Planning Organizations (MPOs), Regional Transportation Committees, local officials, and public involvement committees. This process identifies transportation needs, based on data and public input, documents available data on each project, sets priorities for input to the Statewide Transportation Plan, Statewide Transportation Improvement Program and the Highway Plan. This statewide transportation planning identification, prioritization and ranking process complies with federal reauthorization and legislation requirements to inform, solicit input from and consult with transportation users, publicly elected officials, and representatives from all transportation modes and the underserved populations.

2.2 STATE HIGHWAY PLAN – SHIFT (STRATEGIC HIGHWAY INVESTMENT FORMULA FOR TOMORROW)

Charged by Governor Matt Bevin to create a new system for prioritizing transportation dollars that is data-driven, objective and transparent, the Kentucky Transportation Cabinet developed a strategic funding model to invest limited transportation funding across Kentucky. Composed of both statewide and regional projects, SHIFT is a tool to create a more balanced plan that is shaped by state and local transportation leaders’ input. The approach helps bring balance and dependability to Kentucky’s previously overprogrammed Highway Plan. SHIFT is a collaborative model that uses measurable data to assess the benefits of planned projects and compare them to each other. SHIFT allows policy makers to see just how far down the priority list our limited dollars will go and which other projects could be funded if additional dollars are generated.

Projects are scored based on these factors:

- Improving safety
- Preserving existing infrastructure
- Reducing congestion
- Fueling economic growth
- Spending tax dollars wisely (cost/benefit)

SHIFT dollars are devoted to capital improvement projects that are funded with state and federal dollars or only federal dollars. The chart below shows the types of projects included in SHIFT and those that fall outside the scope of SHIFT that use other funding sources.

CHAPTER 3: MAJOR TRAFFIC GENERATORS

3.1 INTRODUCTION

Major Traffic Generators (MTGs) are those land uses that create larger volumes or concentrations of traffic. Examples include schools, major shopping centers, parks and recreational facilities, hospitals, industrial parks, business parks or other major commercial areas, distribution centers, and multimodal facilities. MTGs can have a profound impact on the operations of the surrounding road network.

In order to understand traffic patterns and volumes in an area, it is important to know about existing MTGs and changes that have occurred such as the addition or closing of a MTG. To facilitate this understanding, the ADD maintains an inventory of MTG locations. This data can be made available to transportation planners, designers, the public, and local officials when making transportation decisions such as the highway prioritization process, or corridor improvement study, or development and calibration of traffic models.

The inventory is maintained as part of a Geographic Information System (GIS) and can be displayed on maps with existing traffic data such as traffic counts, adequacy ratings, unscheduled needs list, highway plan projects, safety data, etc. FIVCO has a current MTG inventory with locations identified throughout the region. These facilities are identified by one of the following types: commercial, distribution, freight, industry, intermodal, major shopping center, medical, parks & recreation, and school. This inventory is reviewed yearly with the RTC to ensure accuracy and the RTC is encouraged to inform FIVCO staff of changes that have occurred in their communities such as the closing or opening of a new facility.

The maps located in section 4.2 illustrate the location of the current FIVCO MTG inventory. County maps, city maps and community maps are used where necessary to provide a visual tool of the inventory within the existing road network. Updates or other changes are submitted each year to the KYTC.
3.2 Major Traffic Generator Location Maps
3.3 Introduction

The Major Freight Users Inventory is a listing of major manufacturers and distribution centers for truck and rail of greater than 100 employees in each ADD’s region. Each Add is to Identify and gather data for each MFU which includes Contact information, number of truck bays, average number of trucks daily, feet of rail, average number of rail cars daily and intermodal connector needs. Each Major Freight User will be mapped with GPS and maintained in a GIS database.

In summary the purpose of this task is to maintain an inventory of existing Major Freight Users in the area. The information will be used to develop an idea of where we may need to improve those intermodal facilities in order to promote the safe and efficient movement of people, goods and services.

Kentucky Freight Focus Network (KFFN) was formed to focus limited state resources on the most significant transportation facilities and to eliminate bottlenecks that impede safe, efficient, and reliable transportation. Kentucky’s Freight Focus Network includes public riverports, navigable waterways with public riverports, airports, highways, rail, and intermodal connectors.
3.4 Map of Major Freight User Facilities Identified

Boyd County Major Freight Users

- Major Freight User
CHAPTER 4: INTERMODAL CONNECTOR REVIEW

4.1 INTRODUCTION

An Intermodal Connector is defined as a highway facility providing direct access for a freight generator, shipper or port terminal (rail or river) with a major transportation thoroughfare such as an interstate highway. FIVCO periodically reviews the FHWA Official National Highway System (NHS) Intermodal Connector Listing for Kentucky for obvious changes to the listing including facilities that have ceased operations or no longer meet FHWA criteria for listing and recommend the facility to be removed from the base list. FIVCO also identifies facilities that are not listed on the NHS Intermodal Connector Listing that meet FHWA criteria and recommend those be added to the base list. This information is used to help identify projects to be recommended for Kentucky’s Six Year Plan, the Statewide Long Range Plan, and Unscheduled Projects List.

CHAPTER 5: TRUCK PARKING INVENTORY

5.1 INTRODUCTION

The purpose of this task is to maintain an inventory of existing Truck Parking resources. The information will be used to develop an idea of where we may need to improve those facilities in order to promote the safe and efficient movement of people, goods and services.

Truck Parking Inventory Includes:

- Locations – Route and Milepoint and/or Landmarks
- Facility Types – Rest Area, Weigh Station, Welcome Centers, Commercial Parking Lots, etc.
- Facilities Available (if known) – Rest Rooms, Restaurants, Vending Machines
- Coordinates for latitude and longitude
- Parking Areas with greater than 20 spaces available
- Minimum number of trucks threshold as determined by ADD Transportation Planners, with approval by KYTC, the number of trucks and/or spaces will not be identified.

5.2 MAP OF TRUCK PARKING INVENTORY
CHAPTER 6: LIST OF RAIL YARDS

6.1 INTRODUCTION

A list of rail yards showing active railroads including rail yard locations throughout the state was collected in FY10. Each year the ADD reviews this listing for minor revisions. During this process, if rail yards are discovered that are not identified, the ADD planner records the name and location and updates the list and map providing the information to KYTC. If during this process a rail yard is discovered to be no longer active, then the updated listing to KYTC will be noted as “not in use”.

Contacts and local knowledge should be cultivated regarding the region’s rail yards and updates submitted to KYTC on an as needed basis. During the course of business it may become necessary to contact local stakeholders and/or industry experts in order to garner local input on transportation issues or opportunities affecting the area. FIVCO maintains this list of rail yards in order to know where improvements to intermodal connections may be warranted in order to promote the safe and efficient movement of goods and services.

The rail yard locations are illustrated in the map in section 8.2. More information can be obtained by contacting the FIVCO ADD Transportation Planner.

6.2 MAP OF RAIL YARD LOCATIONS

![Map of FIVCO Area Rail Yards](image)
CHAPTER 7: BICYCLE PEDESTRIAN ASSETS

7.1 Introduction

The ADD works with identified communities to locate any existing bicycle or pedestrian assets or accommodations within the jurisdiction to develop spatial information accordingly. Accommodations or assets may include: location of sidewalks, crosswalks, bike lanes, etc.

As transportation planner we are tasked to provide recommendations on the best ways to incorporate design, operational efficiency, and better management of our transportation network. In relationship to bicycle and pedestrian facilities; often time we don’t have accurate (if any) data on where current facilities are located. To better consider and recommend the inclusion of future facilities within ALL types of road work, we need to know where logical connections may be located. We need to know where current missing links may be located in a downtown sidewalk network. We need to identify opportunities for connections of bicycle facilities; both locally and regionally.

In 2014 KYTC partnered with the ADD agencies to begin the start of a more complete statewide bicycle and pedestrian GIS inventory database of all pedestrian and bicycling facilities/assets. These facilities include anything that the bike/ped public uses for non-motorized transportation in the city or community such as sidewalks, bike lanes, bike paths, or separated multi-use paths.

The main objective is to better serve the non-motorized transportation needs of our public. Our common goals of providing a safer, more efficient, environmentally sound, and fiscally responsible complete transportation system that helps deliver better economic opportunities and enhancing the quality of life in Kentuckians.

The bike/ped plans and information collected by FIVCO ADD is currently available on an interactive map at http://maps.kytc.ky.gov/photolog/?config=BikePedPlan.

9.2 BICYCLE AND PEDESTRIAN FACILITIES (COMPLETED LOCATIONS)

FIVCO ADD COMPLETED CITIES:
All FIVCO cities have completed sidewalks maps. They are listed here by order they were completed.

- Grayson (Carter)

- Blaine (Lawrence)
- Sandy Hook (Elliott)
- South Shore (Greenup)
- Worthington (Greenup)
- Wurtland (Greenup)
- Catlettsburg (Boyd)
- Flatwoods (Greenup)
- Russell (Greenup)
- Ashland (Boyd)
CHAPTER 8: TRANSPORTATION TERMS AND ACRONYMS

8.1 GLOSSARY OF TERMS AND ACRONYMS

The following glossary has been created as a reference tool for some of the more commonly used transportation terms and acronyms.

▪ A ▪

Adequacy Rating: Adequacy Rating is a numerical score from 0 to 100 evaluating the current condition of a roadway segment based on congestion, safety, and pavement condition.

American Association of State Highway and Transportation Officials (AASHTO): AASHTO is a nonprofit, nonpartisan association representing highway and transportation departments in the 50 states, the District of Columbia and Puerto Rico. It represents all five transportation modes: air, highways, public transportation, rail and water. Its primary goal is to foster the development, operation and maintenance of an integrated national transportation system.

American Public Transportation Association (APTA): The American Public Transportation Association (APTA) is an international organization that has been representing the transit industry for over 100 years, since 1882. Over ninety percent of passengers using transit in the U.S. and Canada are carried by APTA members. APTA includes bus, rapid transit and commuter rail systems, and the organizations responsible for planning, designing, constructing, financing and operating transit systems. In addition, government agencies, metropolitan planning organizations, state departments of transportation, academic institutions, and trade publications are also part of APTA.

Americans with Disabilities Act of 1990 (ADA): A federal law prohibiting discrimination against people with disabilities. Requires public entities and public accommodations to provide accessible accommodations for people with disabilities.

Area Development District (ADD): Fifteen regional planning agencies mandated by state legislation. The fifteen ADDs in Kentucky are the regional planning agencies through which various federal and state programs are administered. The state’s rural transportation planning program is administered and facilitated through the fifteen Area Development Districts.

Arterial: A class of roads serving major traffic movements (high-speed, high volume) for travel between major points.

Association of Metropolitan Planning Organizations (AMPO): AMPO is a nonprofit, membership organization established in 1994 to serve the needs and interests of Metropolitan Planning Organizations (MPOs) nationwide. AMPO offers its members MPOs technical assistance and training, conferences and workshops, frequent print and electronic communications, research, a forum for transportation policy development and coalition building, and a variety of other services.

▪ B ▪

Bicycle Facilities/Amenities: A general term denoting provisions made to accommodate or encourage bicycling, including parking facilities, shared roadways, bikeways, etc.

Bicycle Lane (Bike Lane): A portion of a roadway which has been designated by striping, signing and pavement markings for the exclusive use of bicyclists.

Bicycle Route (Bike Route): A segment of a system of bikeways designated by the jurisdiction having the authority with appropriate directional and informational markers, with or without a specific bicycle route number.

Bikeway: A facility designed to accommodate bicycle travel for recreational or commuting purposes. Bikeways are not necessarily separated facilities; they may be designed and operated to be shared with other travel modes.

▪ C ▪

Census Defined Urbanized Area (UZA): UZA is defined by the Bureau of the Census as being comprised of “… one or more central places/cities, plus the adjacent densely settled surrounding territory (urban fringe) that together has a minimum of 50,000 persons.” The urban fringe consists of a contiguous territory having a population density of at least 1,000 per square mile. The UZA provides population totals for transportation-related funding formulas that require an urban/rural population number.

Coal Haul: Coal Haul is those routes over which coal was reported transported by truck during the previous calendar year.

Collector: A roadway linking traffic on local roads to the arterial road network.
**Critical Crash Rate Factor (CRF):** Critical Crash Rate Factor—the quotient showing the ratio of the crash rate for a roadway spot or segment divided by the critical crash rate for that roadway spot or segment based on roadway type, number of lanes, and median type. The critical rate for a roadway type is determined annually by the Kentucky Transportation Center.

**E**

**Environmental Justice (EJ):** Environmental Justice; a term used to encapsulate the requirements of federal Executive Order 12898 which state, in part, that “each Federal agency shall make achieving environmental justice part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority populations and low income populations” and hence to ensure equal environmental protection to all groups potentially impacted by a transportation development project.

**Extended Weight:** Extended Weight is a designated highway network over which certain vehicular weight limits are relaxed for coal haul vehicles.

**F**

**Federal Highway Administration (FHWA):** The division of the US Department of Transportation responsible for funding highway policy and funding.

**Federal Transit Administration (FTA):** A Division of the US Department of Transportation (USDOT) responsible for funding transit planning and programs.

**Functional Classification:** A system of classifying rural and urban roadways by use and level of traffic volume: interstates, arterials, collectors, and local roads are the chief classes.

**G**

**Geographic Information System (GIS):** A GIS is a computerized mapping technology that allows the creation and overlay of various geographic features, commonly linked to socioeconomic and other data.

**H**

**Highway District Office (HDO):** Kentucky has twelve district highway offices located throughout the state.

**Highway Information System (HIS):** Highway Information System: a comprehensive database of highway inventory information maintained by, and in many cases collected by, the KYTC Division of Planning.

**I**

**Intermodal:** The ability to connect and the connections between modes of transportation.

**Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA):** Legislative initiative by the US Congress that restructured funding for transportation programs. ISTEA authorized increased levels of highway and transportation funding from FY92-97 and increased the role of regional planning commissions/MPO in funding decisions. The Act also required comprehensive regional/statewide long-term transportation plans and increased emphasis on public participation and transportation alternatives. Many of the programs that began with ISTEA have been continued through the Transportation Equity Act for the 21st Century (TEA-21): signed into law June of 1998.

**International Roughness Index (IRI):** International Roughness Index is a measure of pavement roughness.

**K**

**Kentucky Transportation Cabinet (KYTC):** KYTC is the state agency responsible for transportation funding, planning and programs at the statewide level.

**L**

**Level of Service (LOS):** This term refers to a standard measurement used by transportation officials which reflects the relative ease of traffic flow in a scale of A to F, with free-flow being rated LOS-A and highly congested conditions rated as LOS-F.

**Local Roads:** Local roads carry the lowest traffic volumes and typically connect with other local roads and collectors (i.e., internal subdivision roads). This class of roadway is generally excluded from Federal funding.
LONG-RANGE STATEWIDE TRANSPORTATION PLAN: A federally required long-range transportation plan for a minimum period of twenty years. The federal legislation requires that a plan be developed for at least a twenty year period and must be financially balanced. This document, which was first produced in Kentucky in 1995 and updated in 1999, included both policy and projects.

M

METROPOLITAN PLANNING ORGANIZATION (MPO): The organizational entity designated by law with responsibility for developing transportation plans and programs for urbanized areas of 50,000 or more in population. MPOs are established by agreement of the Governor(s) and units of local government which together represent 75% of the affected population of an urbanized area.

METROPOLITAN STATISTICAL AREA (MSA): An area defined by the Office of Management and Budget as a Federal statistical standard. An area qualifies for recognition as an MSA if it includes a city of at least 50,000 population or an urbanized area of at least 50,000 with a total metropolitan area population of at least 100,000.

MILE POINT (MP): Mile Point; used, along with county and route number, to identify location of a highway segment.

N

NATIONAL HIGHWAY (NHS): A network of interstate and state highways which serve longer distance mobility needs, are important to the nation’s economy, defense, mobility, and are eligible for matching federal funds for capital improvement.

NATIONAL TRUCK NETWORK (NN): National Truck Network are those routes on the state maintained road system which have been specifically designated by KYTC and approved by FHWA for use by motor vehicles (trucks) with increased dimensions (e.g., 102 in. wide, 13-6” high, semi-trailers up to 53 feet long, trailers 28 feet long-not to exceed two (2) trailers per truck).

P

PEDESTRIAN: A person who travels on foot or who uses assistive devices, such as a wheelchair, for mobility.

POVERTY LEVEL: The minimum level of money income adequate for families of different sizes, in keeping with American consumption patterns. These levels are determined annually by the U.S. government on the basis of an index originated by the U.S. Social Security Administration and released biennially by the U.S. Census Bureau for states and counties.

PROJECT IDENTIFICATION FORM (PIF): An identification form developed by KYTC Division of Planning for all transportation projects that contains problem statement, project description, specific geometric and analytical data, cost estimates, and assumptions for the project. The form is prepared when the transportation need is first noted and the information is entered into the Unscheduled Project List database and is updated periodically. Maps and pictures for the project may also be attached.

R

Pavement Rideability Index (RI): A general measure of pavement conditions. The RI is based on a scale of 0 to 5, with 0 being poor and 5 being very good.

Right-of-Way (ROW): A ROW is a priority path for the construction and operation of highways, light and heavy rail, railroads, et cetera. The ROW phase of a project is the time period in which land in the right-of-way will be purchased.

S

Safe, Accountable, Flexible and Efficient Transportation Equity Act: A Legacy for Users: (SAFETEA-LU) The federal transportation reauthorization legislation, enacted August 10, 2005, as Public Law 109-59. SAFETEA-LU authorizes the Federal surface transportation programs for highways, highway safety, and transit for the 5 year period 2005-2009 and continued many of the provisions of TEA-21, but also further emphasized and elevated the importance of safety and security, further coordination of statewide planning with the metropolitan areas, consultation with local elected officials, and continued public involvement.

Scenic Byways: These routes are nominated by local support groups and designated by the Transportation Cabinet because they are deemed to have roadside or view sheds of aesthetic, historical, cultural, natural, archaeological, and/or recreational value worthy of preservation, restoration, protection, and or enhancement.

Shared Use Path: A pathway physically separated from motor vehicle traffic and used by bicyclists and pedestrians. Generally, shared use paths serve corridors not served by streets and highways to minimize conflict with cross-street traffic.
**Small Urban Area (SUA):** Small Urban Area; population centers of between 5,000 and 50,000 persons.

**State Implementation Plan (SIP):** A plan mandated by the CAA and developed by each state that contains procedures to monitor, control, maintain, and enforce compliance with National Ambient Air Quality Standards (NAAQS).

**Six Year Highway Plan (SYP):** A short-range highway plan of projects to be implemented by phase and funding levels for a six year period. This plan is mandated by Kentucky Legislation and is updated and approved by the Kentucky Legislature every two years.

**Statewide Transportation Improvement Program (STIP):** A short term transportation planning document covering at least a 3 year period and updated at least every 2 years. STIPs are created in conjunction with MPOs and the MPO’s TIP is incorporated into the state’s STIP. The STIP includes a priority list of projects to be carried out in each of the 3 years. Projects included in the STIP must be consistent with the long term transportation plan, must conform to regional air quality implementation plans, and must be financially constrained (achievable with existing or anticipated funding sources).

**Strategic Highway Corridor Network (STRAHNET):** A federal highway designation of selected highways to be used for certain national emergencies.

**System Classification/Functional Classification:** The categorization of transportation facilities by their actual or expected use characteristics. The distinction is usually made on the basis of access vs. mobility, where lower order roadways are used primarily for access to individual land uses, while higher order roadways are used primarily for travel between towns or cities.

**Surface Transportation Program (STP):** A categorical funding program included under ISTEA and continued under TEA-21 and SAFETEA-LU for transportation roadway projects. Funds may be used for a wide variety of purposes, including: roadway construction, reconstruction, resurfacing, restoration and rehabilitation; roadway operational improvements; capital costs for transit projects; highway and safety.

**T**

**Traffic Volume:** Number of vehicles passing a given point over a period of time.

**Transportation Enhancement Funds (TE):** A federal funding category for projects that add community or environmental value to any active or completed transportation project. For instance, sidewalk, landscaping and bikeway projects are some of the ways in which a roadway could be enhanced.

**Transportation Equity Act of the 21st Century (TEA-21):** A law enacted in 1998, TEA-21 authorized federal funding for transportation investment for the time period spanning fiscal years 1998 to 2003. Approximately $218 billion in funding was authorized, the largest amount in history, and is used for highway, transit, and other surface transportation programs.

**Transportation Improvement Program (TIP):** Transportation Improvement Program is a document prepared by the MPO. It contains a prioritized list of projects within the metropolitan area for the next four years. This document identifies the projects for inclusion into the STIP. This document must be financially constrained and must be a direct subset of area’s Long-Range Transportation Plan.

**U**

**Unscheduled Project List (UPL):** UPL-Unscheduled Project List (formerly Unscheduled Needs List, or UNL); a list, maintained by the KYTC Division of Planning of potential transportation projects, with project data derived from the KYTC Project Identification Form.

**Urban Area (UA):** The Census Bureau defines “urban” for the 1990 census as comprising all territory, population, and housing units in urbanized areas and in places of 2,500 or more persons outside urbanized areas. More specifically, “urban” consists of territory, persons, and housing units in: 1.) Places of 2,500 or more persons incorporated as cities, villages, boroughs (except in Alaska and New York), and towns (except in the six New England States, New York, and Wisconsin), but excluding the rural portions of “extended cities;” 2.) Census designated places of 2,500 or more persons; and 3.) Other territory, incorporated or unincorporated, included in urbanized areas. Territory, population, and housing units not classified as urban constitute “rural.” This boundary is the line of demarcation for rural/urban functional classification on roadways.

**V**

**Volume to Service Flow Ratio (V/SF):** Volume to Service Flow ratio; a quotient showing the ratio of a facility’s actual vehicular traffic volume to its theoretical maximum potential vehicular traffic volume; a ratio higher than about 0.6 indicates traffic volumes are approaching congested conditions. This is also referred to V/C or Volume to Capacity ratio.
